Suitable to Fluid having the following properties:
- Abrasive and not Abrasive
- Corrosive (Alkaline / Acid / Aggressive) and not Corrosive
- Low / Medium / High / Very High Viscosities
- Not Lubricating or Lubricating
- Medium / High percentage of Gas or Air dissolved in Liquid (Multiphase versions available)
- Slightly Dirty (small particles)

Advantages of the Operating Principle:
- Capability of handling a Wide Range of viscosities and pressures = one pump for many types of fluids and many flow rates!
- High Suction Lift Capability - the pump NPSH being very low - down to 1.5 meters.
- Self Priming without any auxiliary devices.
- Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.
- Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low internal velocities given by the screws movement.
- High Rotating Speeds are possible thanks to the low inertia of the screws.
- Screws are contact-less so wear-out is minimized and Pump Life is extended.
- Flow rate is constant even when pressure changes.
- Reversible at Low Speeds / Pressure.
- Capability of Dry Running for a limited period and in particular conditions.
- Low noise level & Low vibration.

Pump Series HD, HDL, HDV Series:
- Maximum design pressure: 20 bar (standard) [300 psig]
- Flow rates: up to 3500 m³/h [15400 psig]
- Viscosity of the pumped fluid: up to 35,000 cSt
- Pipe Nominal Size DN: from 50 to 750 [from 2" up to 30"
- Rotation speed: from 200 up to 2200 rpm
- Temperature range: -46 / +350 °C [-51 / +662 °F] - ON REQUEST -60°C
- Pulsations: Minimized (almost zero)
- Bearing types: External Bearings and Gears in oil bath

Standard Materials:
- Casing / Liner: Cast Iron, Ductile Cast Iron
- Screws: High Strength Low Alloy Steel
- Shafts: Stainless Steel AISI 420
- Stainless Steel AISI 17-4 PH
- 12 Cr Stainless Steel: Stainless Steel AISI 5316/5316L
- Stainless Steel AISI 5316/5316L (Cast or Fabricated): Stainless Steel 17-4 PH or AISI 431
- Stainless Steel AISI 5316/5316L (Cast or Fabricated): Duplex & Super Duplex St. Steel
- Bronze, Nickel Aluminum Bronze: Duplex & Super Duplex St. Steel
- Monel, Inconel®, Hastelloy
- Duplex & Super Duplex St. Steel: Monel, Inconel®, Hastelloy
- Monel, Inconel®, Hastelloy
- Inconel Weld Overlay (cladding): HVOF Spray Coating /Tungsten Carbine Coating
- Monel, Inconel®, Hastelloy: Chromium Plating
- Ni-Resist: Ni-Resist

Customized materials:
- Other Alloys and Material Combinations are available on request
- NORSOK Compliant Materials are available on request

Main Application Fields:
- HD / HDL / HDV Series
  - OIL & GAS UPSTREAM / MIDSTREAM / DOWNSTREAM: FPSOs, Offshore Platforms, Oil Fields, Oil Pipelines, Gathering Stations, Tank Storages / Terminals
  - PETROCHEMICAL: Refinery, Petrochemical Complex, Lubricants Plants, Bitumen/Asphalt/Tar Plants
  - CHEMICAL: Resin Production, Paint Production, Green Fuels, Polymeric Suspensions
  - MARINE & SHIPBUILDING: Tankers, Barges, Cargo Ships, Support Vessels, FPSOs, Offshore Platforms Hulls
  - POWER GENERATION: Heavy Fuel Oil Power Plants, Lube Oil Systems

# PUMP TYPE

## TWIN SCREW PUMPS - INTERNAL TIMING GEARS

### Pump Series
- SR Series:
  - Installation Options: Horizontal (Cast Casing)
  - Executions: Standard & API 676 - Internal Gears and Bearings (Wetted and cooled by the Pumped Fluid)

- SD Series:
  - Installation Options: Horizontal (Cast Casing)
  - Executions: Standard & API 676 - Internal Gears and Bearings (Wetted and cooled by the Pumped Fluid)

- SDL Series:
  - Installation Options: Horizontal (Fabricated Steel Casing, with Replaceable Liner)
  - Executions: Standard & API 676 - Internal Gears and Bearings (Wetted and cooled by the Pumped Fluid)

- SRV Series & SDV Series:
  - Vertical

### Optimized for Applications in:
- Oil & Gas, Petrochemical, Chemical, Marine & Shipbuilding, Power Generation

### Suitable to Fluid having the following properties:
- Not Abrasive
- Not Corrosive / Slightly Corrosive
- Medium / High Viscosities
- Lubricating / Slightly Lubricating
- Small percentage of Gas or Air dissolved in Liquid
- Clean, with Minimal Impurities (Small Amount of Solid Particles)

### Advantages of the Operating Principle:
- Capability of handling a Wide Range of viscosities and pressures
- High Suction Lift - Capability - the pump NPSH being very low - down to 1,5 meters.
- Self Priming without any auxiliary devices.
- Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.
- Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low internal velocities given by the screws movement.
- High Rotating Speeds are possible thanks to the low inertia of the screws.
- Flow rate is constant even when pressure changes.
- Reversible at Low Speeds / Pressure.
- Capability of Dry Running for a limited period and in particular conditions.
- Low noise level & Low vibration.

### Maximum design pressure:
- SR, SRV Series: 14 bar (standard) [204 psig]
- SD Series: 20 bar (standard) [300 psig]
- SDL, SDV Series: 50 barg [730 psig]

### Flow rates:
- SR, SRV Series: up to 1200 m³/h [5280 GPM]
- SD Series: up to 1200 m³/h [5280 GPM]
- SDL, SDV Series: up to 1200 m³/h [5280 GPM]

### Viscosity of the pumped fluid:
- up to 2.000 cSt

### Pipe Nominal Size DN:
- SR, SRV Series: from 50 to 400 - from 2'' to 16''
- SD Series: from 50 to 400 - from 2'' to 16''
- SDL, SDV Series: from 50 to 400 - from 2'' to 16''

### Rotation speed:
- from 200 up to 2200 rpm

### Temperature range:
- SR, SRV Series: -46 / +300 °C [-51 / +572 °F]
- SD Series: -46 / +300 °C [-51 / +572 °F]
- SDL, SDV Series: -46 / +300 °C [-51 / +572 °F]

### Pulsations:
- Minimized (almost zero)

### Bearing types:
- Internal Bearings and Gears, wetted and cooled by the Pumped Fluid

### Standard Materials:
- Casing / Liner: Cast Iron, Ductile Cast Iron
- Screws: Ductile Cast Iron
- Shafts: High Strength Low Alloy Steel
- Low Temperature Carbon Steel (Cast or Fabricated): Stainless Steel AISI 420
- 12% Cr Stainless Steel: Stainless Steel AISI 5316/5316L
- Stainless Steel AISI 5316/5316L (Cast or Fabricated): Stainless Steel 17-4 PH

### Customized materials:
- Other Alloys and Material Combinations are available on request
- NORSOK Compliant Materials are available on request

### Main Application Fields:
- SR / SD / SDL / SRV / SDV Series:
  - OIL & GAS MIDSTREAM / DOWNSTREAM: Tank Storages / Terminals, Oil Pipelines
  - PETROCHEMICAL: Refinery, Petrochemical Complex, Lubricants Plants
  - CHEMICAL: Green Fuels, Clean Chemicals
  - MARINE & SHIPBUILDING: Tankers, Barges, Cargo Ships, Support Vessels
  - POWER GENERATION: Heavy Fuel Oil Power Plants, Lube Oil Systems

## PUMP TYPE: VERTICAL TWIN SCREW PUMPS

### Pump Series: VDC Series:

**Installation Options:** Vertical - Submerged

**Executions:** Standard & API 676 - Timing Gears - External Gears and Bearings

**Optimized for Applications in:** Oil & Gas, Petrochemical, Marine & Shipbuilding

**Suitable to Fluid having the following properties:**
- Abrasive and not Abrasive
- Corrosive (Alkaline / Acid / Aggressive) and not Corrosive
- Low / Medium / High / Very High Viscosities
- Not Lubricating or Lubricating
- Medium / High percentage of Gas or Air dissolved in Liquid (Multiphase versions available)
- Slightly Dirty (small particles)

### Advantages of the Operating Principle:
- Capability of handling a Wide Range of viscosities and pressures
  - one pump for many types of fluids and many flow rates!
- High Suction Lift Capability - the pump NPSH being very low - down to 1.5 meters.
- Self Priming without any auxiliary devices.
- Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.
- Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low internal velocities given by the screws movement.
- High Rotating Speeds are possible thanks to the low inertia of the screws.
- Screws are contact-less so wear-out is minimized and Pump Life is extended.
- Flow rate is constant even when pressure changes.
- Reversible at Low Speeds / Pressure.
- Capability of Dry Running for a limited period and in particular conditions.
- Low noise level & Low vibration.

### Pump Series: VDC Series:

**Maximum design pressure:** 50 barg [730 psig]

**Flow rates:** up to 600 m³/h [2650 GPM]

**Viscosity of the pumped fluid:** up to 35,000 cSt

**Pipe Nominal Size DN:** from 50 to 400 – from 2" to 16"

**Rotation speed:** from 200 up to 2200 rpm

**Temperature range:** -46 / +350 °C [-51 / +662 °F] - ON REQUEST -60°C

**Pulsations:** Minimized (almost zero)

**Bearing types:** Bearings and Gears wetted by Pumped Fluid

**Bearing types:** External Bearings and Gears in oil bath

### PUMP TYPE

<table>
<thead>
<tr>
<th>MULTIPHASE TWIN SCREW PUMPS</th>
</tr>
</thead>
</table>

#### Pump Series
- **MAX GVF (Gas Void Fraction):**
  - MP Series: Up to 60% GVF

#### Installation Options:
- Horizontal

#### Executions:
- Standard & API 676 - External Timing Gears and Bearings

#### Optimized for Applications in:
- Oil & Gas

#### Suitable to Fluid having the following properties:
- Abrasive and not Abrasive
- Corrosive (Alkaline / Acid / Aggressive) and not Corrosive
- Low / Medium / High Viscosities
- Not Lubricating or Lubricating
- Up to 60% of Gas Void Fraction
- Slightly Dirty (small sand particles)
- Special Hardening available (Tungsten Carbide Coating)

#### Advantages of the Operating Principle:
- Capability of handling a Wide Range of viscosities and pressures
- One pump for many types of fluids and many flow rates!
- High Suction Lift Capability - the pump NPSH being very low - down to 1.5 meters.
- Self Priming without any auxiliary devices.
- Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.
- Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low internal velocities given by the screws movement.
- High Rotating Speeds are possible thanks to the low inertia of the screws.
- Screws are contact-less so wear-out is minimized and Pump Life is extended.
- Flow rate is constant even when pressure changes.
- Capable of Pumping Gas mixed with Liquid.
- Capability of Dry Running for a limited period and in particular conditions.
- Low noise level & Low vibration.

#### Pump Series
- **MP Series:**
  - Maximum design pressure: 149 barg [2170 psig]
  - Max ANSI 900 rating
  - Flow rates (liquid equivalent): up to 3500 m³/h (15400 psig)
  - Viscosity of the pumped fluid: up to 5,000 cSt
  - Pipe Nominal Size DN: from 50 to 750 [from 2" up to 30"]
  - Rotation speed: from 200 up to 2200 rpm
  - Temperature range: -46 / +350 °C [-51 / +662 °F] - ON REQUEST -60°C
  - Pulsations: Minimized (almost zero)
  - Bearing types: External Bearings and Gears in oil bath
  - Liquid Recirculation Options:
    - No Recirculation
    - Internal Liquid Recirculation Valve

#### Standard Materials:
- **Casing / Liner**
- Carbon Steel (Cast or Fabricated)
- Low Temperature Carbon Steel (Cast or Fabricated)
- 12% Cr Stainless Steel
- Stainless Steel AISI 5316/5316L (Cast or Fabricated)
- Duplex & Super Duplex St. Steel
- Inconel Weld Overlay (cladding)
- Monel, Inconel®, Hastelloy
- Ni-Resist CRA Weld Overlay

- **Shafts**
- Ductile Cast Iron
- High Strenght Low Alloy Steel
- Stainless Steel AISI 420
- Stainless Steel AISI 17-4 PH
- Stainless Steel AISI 5316/5316L
- Stainless Steel XM-19
- Duplex & Super Duplex St. Steel
- Monel, Inconel®, Hastelloy
- HVOF Spray Coating /Tungsten Carbide Coating
- Chromium Plating
- CRA Weld Overlay

#### Customized materials:
- Other Alloys and Material Combinations are available on request
- NORSOK Compliant Materials are available on request

#### Main Application Fields:
- **MP SERIES**
  - OIL & GAS UPSTREAM / MIDSTREAM: FPSOs, Offshore Platforms, Oil Fields, Oil Pipelines, Gathering Stations

Note
### PUMP TYPE

**HOLLOW DISK PUMPS**

**Executions:** Standard & API 676

**Advantages:**
- Self Priming without any auxiliary devices - just fill out the cavity with liquid before start-up
- Low operating speeds - capable of handling very viscous and fluids shear-sensitive - less wear and higher reliability
- Reverse flow by operating in reverse rotation while keeping constant capacity
- Elasticity of the disk, with self-recover of the worn out parts and of the thermal expansions, allowing the passage of solid particles in the fluid

### Pump Series

<tr>
<td>pulsations: Yes Very low</td>
<td></td>
</tr>
<tr>
<td>Dosing capability: Available (UNI PN10 - DIN PN16 &amp; ANSI 150) Available (UNI PN10 - DIN PN16 &amp; ANSI 150)</td>
<td></td>
</tr>
</tbody>
</table>

### Standard Materials:

- **Casing and Cover:** Cast Iron G25
- **Impeller Disk:** Stainless Steel AISI 316
- **Shaft:** Carbon Steel C40

### Special Materials:

- **Duplex Stainless Steel:** Super Duplex
- **Super Duplex:** Hastelloy
- **Inconel:** Titanium
- **Titanium:** Monel
- **Nickel-Aluminium Bronze:** Monel
- **Alloy 20:** Hastelloy

### Complete Units:

- **We supply the complete unit: Pump, Reduction Gear or Variable Speed Drive, Motor, Baseplate**
- **On Request:** Please see our website www.3pprinz.com for further information about our wide range of customization, options and accessories

### APPLICATION FIELDS

#### Oil & Gas

- **Chemical Products:** Muds
- **Light and Heavy Hydrocarbons:** Lubricating Oil
- **Petrochemical Products:** Gasoline, Fuel Oil
- **Fluids from the Refinery Process:** Phenol, Crude Oil
- **Marine & Shipbuilding:** Transfer of Tanker Fluids, Fuel Oil
- **Cargo Load and Offload:** Sludge, Ooze, Seawater
- **Service Fluids and Water:** Waste Oil, Sewage

#### Petrochemical Industry:

- **Hydrocarbons (light and heavy):** All types of Oils, Bitumen and Tar, Crude Oil (also Sour)
- **Light and Heavy Hydrocarbons:** All types of Oils
- **Gasoline:** Fuel Oil
- **Phenol:** Crude Oil
- **Benzene and Toluene:** Diesel

#### Marine & Shipbuilding:

- **Transfer of Tanker Fluids:** Diesel
- **Cargo Load and Offload:** Bilge Water, Recycled Oil
- **Service Fluids and Water:** Waste Oil, Sewage, Residues
CN Rotary Vane Pump Series
**Pump type** ROTARY VANE PUMP - CN Series

**Executions:** Standard & API 676

**Advantages:**
- Self Priming
- High Suction Lift
- Self-adjustment of Wear Out
- Capable of Pumping Low Viscosity Fluids at Outstanding Performances
- Lower Power Consumption and Higher Capacity compared to other Positive Displacement Pumps
- Interchangeable ports dimensions with other Major Rotary Vane Suppliers
- Accurate Selection of Vanes Materials for allowing very low friction and minimal wear-out
- Easy and Fast Maintenance (no need to disassembly from main line)
- Versions for Reversible Operation (Double Shaft) are available for Loading and Unloading

**Suitable to a wide range of Temperatures**

**PTO driven versions are available**

**Handling Solid Particles & Dirty Fluids:** Yes (small solids and limited amount)

**Handling Aggressive Fluids:** Yes

**Pulsations:** Very low

**Flanged Adapters:** Available on request: UNI PN10 - DIN PN16 & ANSI 150

**Standard Materials:**
- Casing and Cover: Ductile Cast Iron GJS-400, Cast Steel (ASTM A216 WCB), Stainless Steel AISI 316
- Vanes: Polimeric Fiber, Bronze, PEEK
- Rotor: Ductile Cast Iron, Carbon Steel AISI4140, Bronze, Stainless Steel AISI 316
- Shaft: Carbon Steel, Stainless Steel AISI 316, Duplex Stainless Steel

**Special Materials:**
- Duplex Stainless Steel
- Self Lubricating Alloys: Super Duplex St. Steel, Inconel, Titanium, Nickel-Aluminium Bronze, Alloy 20, Hastelloy
- Super Duplex St. Steel: Super Duplex St. Steel, Inconel, Monel, Hastelloy
- Inconel: Inconel, Inconel
- Titanium: Titanium, Monel
- Nickel-Aluminium Bronze: Monel
- Alloy 20: Monel, Hastelloy
- Hastelloy

**Complete Units:** We supply the complete unit: Pump, Reduction Gear or Variable Speed Drive, Motor, Baseplate
